

HIMANSHU SHAILESH ADWANI

Pennsylvania, United States | (814) 663-7207 | himanshu.adwani@outlook.com | himanshu.sh | github.com/Monochromish

SUMMARY

Senior lead developer and full-stack software engineer with 4 years of experience owning architecture and delivery on production software used by tens of thousands. Lead engineering on Cider, a cross-platform Apple Music client, across Vue.js/Nuxt.js front-ends, Go services, Electron desktop applications, and Linux-based DevOps with Docker, Nix, and CI/CD. Author of open-source projects with 7,000+ combined GitHub stars.

EDUCATION

The Pennsylvania State University — University Park, PA

Bachelor of Science in Computer Science

Expected Spring 2028

GPA: 3.7 / 4.0

TECHNICAL SKILLS

Languages: Go (Golang), C, C++, Rust, C#, JavaScript, TypeScript, HTML5, CSS3, Python, Bash

Frameworks & Libraries: Vue.js, Nuxt.js, Node.js, Electron, Discord.js, Tailwind CSS, daisyUI, Webpack

Infrastructure & Tools: Docker, Docker Compose, Nix and Nix Flakes, CI/CD, GitHub Actions, Git, Linux (NixOS/Ubuntu/Debian) and Windows administration, Nginx, reverse proxy, DNS, TLS/SSL, MongoDB, REST APIs

Domains: Cross-platform desktop development, network protocols, audio processing, embedded systems and firmware, declarative/reproducible builds, self-hosted infrastructure

PROFESSIONAL EXPERIENCE

Senior Lead Developer

Cider Collective LLC

2022 – Present

Remote

- Lead development of Cider, a cross-platform Apple Music client used by tens of thousands, owning architecture and delivery across the front-end and back-end of the production codebase.
- Set technical direction for a distributed team of contributors, driving code review, release planning, and CI/CD delivery cycles.
- Implemented casting support from the protocol layer up, including a Go library for the Google Cast protocol exposed to the desktop client through a cross-platform C FFI.
- Optimized audio-processing pipelines to improve playback quality and output fidelity for end users.
- Built and maintained the company's public-facing website in Nuxt.js and Vue.js.
- Contributed to Cider Legacy, the open-source predecessor, which has 7,100+ GitHub stars.

Firmware Project Manager

Nittany Motorsports (Formula SAE) — Electronics Team

2026 – Present

University Park, PA

- Containerized the firmware build system across two Docker images targeting STM32 and ESP-IDF, with a wrapper CLI that runs builds, linting, DBC generation, software-in-the-loop tests, and flashing, reducing new-member setup to Docker and Git.
- Unified CI to run identical commands in the same images and publish firmware artifacts, caching the 3 GB STM32 image on GHCR by input hash to avoid rebuilding it on every run.
- Added a post-link metadata header embedding git commit, branch, size, and CRC into every STM32 binary, readable from the CLI to verify what firmware is running on the car.
- Built over-the-air telemetry updates and added SD card logging of CAN frames, giving the team a data path when the car is out of range for OTA log retrieval.
- Consolidated two separate embedded web interfaces into one tabbed site on the TCU covering OTA flashing, log retrieval, per-controller version reporting, and SD logging control, reducing TCU firmware size in the process.

PROJECTS

Kalopsia Bot — Open-Source Discord Bot

JavaScript, Discord.js v13, Node.js, MongoDB | github.com/Monochromish/Kalopsia-Bot

108 stars, 62 forks

- Designed and released an open-source Discord bot with slash commands across moderation, economy, utility, and music modules, self-deployed by 60+ forks.
- Integrated MongoDB for persistent per-server state and documented environment-based setup for third-party deployment.

Self-Hosted Infrastructure (Homelab)

Nix, Docker, Linux, Nginx, Home Assistant

2021 – Present

- Architect and administer a self-managed Linux server running a containerized Docker stack: Plex, private cloud storage, Home Assistant automation, and a persistent Minecraft game server.
- Configured secure remote access and networking: reverse proxy routing, DNS, automated TLS renewal, OS patching, uptime monitoring, and automated archival of mobile photo and video libraries to redundant storage.
